For Pocket PC and
Smartphone

System requirements

Pocket PC 2005 Version
Windows Mobile 05
Memory 256Kb

Anthasecure, manages and controls the access of the PDA using a numeric password system that the user can configure and minimize the risk of losing personal and professional information stored in the device, even if the memory card is secured.

General Description

Companies and single users recognize security must be enforced to the highest level today. **anthasecure** secures the information on your device and adds the power of having your personal and professional information under high restrictions and access granted only unto yourself. Create up to a 16 numbers combination to be used as password. This guarantees operating security level of your information when accessing your PDA. Set your own configuration to how many attempts can be allowed, before deletion occurs ensuring your data will be safe and protected even if you have a memory card.

If the number of attempts (set by user) at typing in the password are surpassed automatically all the information contained on your PDA is permanently deleted and your PDA is locked down.

Easy Setup, Fast Deployment

Through the **anthasecure** interface, you generate your own numeric password and settings in minutes, and the next time you turn on the PDA you have the secured password functionality running and your information can only be accessed by you.

Maximum Control

Not every user needs the same level of security, but nobody wants that other people can have access to your personal and professional information, every day all the information contained in your PDA has to be protected and with secure access granted. The only way to solve this issue is that you control the access to your PDA as soon as you turn on the device. Manage your own password and security for peace of mind with **anthasecure** is easy and effective.

Enable Security

Allows you to set and create the configuration to enter new PIN. Deactivate all control systems and delete the current PIN, security can be disabled or activated to your personal requirements.

Password / Repeat password

Allows you to enter and create a numeric PIN (up to 16 digits)

Device/System Wipe

Prompts you that the memory data will be deleted, if you have reached the pre

configured number of attempts with a wrong PIN, follows with a PDA Reset and the device is blocked.

Deletion of SD Card

Prompts you that the SD card will be deleted, if you have reached the pre configured number of attempts with a wrong PIN, follows with a PDA Reset and the device is blocked

Login Attempt Setting

Allows you the user to set the maximum attempts you can enter the PIN number.
